Profile Log

Activity 3.1.1 · Your Feed, Your Profile

Alias (not your real name):	**Date:**

Keep this beside the feed lab. Every user and post in the lab is **invented**. Use an alias or no name at all.

Points: Like **+2** · Comment **+3** · Share **+4** · Hide **−4**. Points go to **every tag** on the post.

1 My reactions

After each round, count what you did. The lab shows each post, so you can count them as you go.

Round	Likes (+2)	Comments (+3)	Shares (+4)	Hides (−4)	Posts I left alone	Explore slots / People like you on?
Round 1						(starts at 0)
Round 2						
Round 3						

Explore slots can be 0, 2 or 3 of 6. Write the number you chose for the next feed, and Y or N for People like you.

2 My profile by tag

Copy the profile totals the lab shows after each round (they keep adding up), or add them up yourself. Negative scores are allowed.

Tag	After round 1	After round 2	After round 3
#space			
#gaming			
#music			
#baking			
#soccer			
#art			
#pets			
#hiking			

3 What my profile says, and what it doesn't

My top 3 interests after round 3 (highest scores)	
The one reaction that changed my feed the most, and how I can tell	
One thing that surprised me	
One guess my profile makes that could be wrong (a profile is guesses, not facts)	

4 Compare with a partner

Share your top 3 interests only. **Don't** share your name, your real posts or your real feed.

My partner's top 3 interests (no names)	
What we share, and where we differ	
Why might two people who reacted to the same posts end up with different profiles?	

☐ I used an alias, and I didn't write down anything about real people or real posts.
